

myLTOdna is a tape authoring app to be used with StorageDNA's HyperTape for Mac. Access files on an LTO tape, similar to a hard drive with a Random Access Database. Archive projects in the field and access files easily, throughout the entire life of a project.

- myLTOdna is intended to be used with PrimeTranscoder to train, read and write to tapes for StorageDNA's HyperTAPE.
- Drag and drop files and folders
- Simple and detailed naming options
- Copy to hard disk and tape at the same time using LTFS SMPTE standards
- Format, mount and unmount tapes easily from the LTO deck controls tab
- PDF reports with thumbnails and metadata
- TXT and CSV reports
- Text, email and desktop notifications
- At-a-glance, color indicated, job status bar
